DevOps Tools

- **Cloud Platforms:** AWS (EC2, S3, IAM, VPC, RDS, Lambda), Azure (VMs, Blob, VNets)
- **CI/CD Tools:** Jenkins, GitLab CI, Azure DevOps
- **IaaS:** Terraform, ARM Templates, CloudFormation, Ansible
- **Containers & Orchestration:** Docker, Kubernetes (AKS, EKS), Helm
- **Monitoring & Logging:** Prometheus, Grafana, CloudWatch, Azure Monitor
- **Scripting:** Shell, Python.
- **Version Control:** Git, GitHub, Bitbucket
- **Operating Systems:** Windows & Linux, Redhat (CentOS, Ubuntu, Amazon Linux)

Technical Skills

- **Cloud:** Proficient in AWS and Azure environments.
- Skilled in user/group management, permissions, Cron jobs, and system monitoring.
- Created Shell scripts for automating maintenance and deployments.
- Automated backups, patching, and log rotation to improve efficiency.
- Configured Apache, Nginx, SSH, FTP, DNS, and firewalls (UFW/iptables).
- Integrated Linux servers with AWS/Azure for CI/CD pipelines.
- Managed Docker containers and deployed on Linux-based Kubernetes clusters.
- Hands-on experience with Terraform for provisioning cloud infrastructure.
- Familiar with tools like Grafana, Prometheus, and Splunk for system monitoring and log analysis.
- Proficient in using Jenkins and GitHub Actions to automate build, test, and deployment processes.

HEMAVARSHINI NAGARAJ

DevOps Engineer

Career Objective

Experienced Cloud and DevOps Engineer with over 4+ years of hands-on expertise in AWS, Jenkins, Terraform, and CI/CD automation. Proven ability to design scalable cloud architectures, implement efficient deployment pipelines, and optimize system performance using Infrastructure as Code (IaC) and modern DevOps best practices. Seeking a challenging role to drive cloud transformation and continuous delivery excellence.

Experience: DevOps Engineer | TCS : May 2021-Present

- Led end-to-end data reconciliation initiatives, ensuring seamless integration and alignment with evolving business requirements and operational standards.
- Extensive hands-on experience with AWS and Azure cloud platforms, managing scalable, secure, and cost-effective DevOps environments.
- Proficient in analyzing, optimizing, and restructuring data warehouse models to support organizational goals and improve data accessibility and performance.
- Skilled in developing dynamic reports and robust data entry forms using Oracle APEX 23.1; delivered multiple full-cycle applications from scratch to production.
- Over 4+ years of experience designing and maintaining robust CI/CD pipelines using Git, GitHub Actions, and Jenkins, with a focus on automation, repeatability, and deployment efficiency.
- Expert in performance tuning and system optimization, ensuring high availability, reliability, and scalability across cloud and on-prem infrastructure.
- Cloud Services Expertise: Deep knowledge of provisioning and managing key AWS/Azure components such as EC2/VMs, S3/Storage Accounts, ALB/Front Door, RDS, IAM, Route 53/Azure DNS, VPC/VPN, Auto Scaling/VMSS, CloudWatch/Azure Monitor, Lambda, Security Groups, and SNS.
- CI/CD Implementation: Proven track record of automating build, test, and deployment workflows using Jenkins and GitHub Actions for faster and error-free releases.
- Containerization: Proficient in Docker - building and managing containerized applications using Dockerfiles, images, volumes, and private/public registries.
- Infrastructure as Code (IaC): Adept at using Terraform and Ansible for automated provisioning, configuration management, and environment consistency across cloud platforms.
- Kubernetes & Orchestration: Solid experience deploying and managing containerized workloads in production using Kubernetes (EKS, AKS) to ensure fault tolerance and scalability.

Project 2: DevOps Engineer | QANTAS Airlines : Mar'22-Present

- Automated routine tasks by writing Ansible playbooks and Shell scripts, significantly reducing manual intervention and operational overhead.

Honors

- Awarded with the title “**Rookie**”, which says in recognition of the tremendous commitment and proactive behaviour in the team and a positive impact to the company”.
- Awarded twice as the “**Best Performer**” in my team.

Education Qualification

- B.Sc Computer Science- **KOVAL KALAIMAGAL COLLEGE OF ARTS & SCIENCE** with 75%
- HSC, **C.S.I GELL MEMORIAL GIRLS HIGHER SECONDARY SCHOOL** with 82%
- SSLC, **C.S.I GELL MEMORIAL GIRLS HIGHER SECONDARY SCHOOL** with 84%

Certification

- **Java** Certification in COREGENIC Institution, Coimbatore

LinkedIn Profile

<https://www.linkedin.com/in/hem-a-nagaraj-b8b421192/>

Languages Known

- English
- Tamil
- Malayalam
- Kannada

Hobby's

- Crochet works
- Badminton
- Cooking

- Fixed vulnerabilities related to SSL/TLS, Tomcat, and Amazon Corretto by applying updates and security best practices.
- Modified and enhanced ETL processes to efficiently Extract, Transform, and Load data into data warehouse systems.
- Proficient in Oracle APEX application development, including analysis, design, testing, and optimization to ensure high performance and system reliability.
- Developed custom SQL queries, procedures, and functions tailored to meet complex customer requirements.
- Installed and administered key DevOps tools including Git, Jenkins, Docker, Kubernetes, Terraform, and Ansible across Ubuntu, Amazon Linux, and RedHat environments.
- Built and maintained robust CI/CD pipelines using Jenkins, GitLab CI, and Azure DevOps for automated code integration and deployment.
- Designed and implemented scalable infrastructure on AWS using Terraform, incorporating modular, reusable configurations.
- Deployed Jenkins in a master-slave setup to enable parallel builds via a distributed build farm, enhancing build performance and speed.
- Created Terraform modules integrated with CI/CD pipelines for zero-downtime infrastructure deployments across multiple environments.
- Deployed and managed Microservices-based applications and their supporting services using containerization and orchestration tools.
- Managed Docker volumes and Kubernetes objects like Deployments, StatefulSets, DaemonSets, Persistent Volumes (PV), and Persistent Volume Claims (PVC).
- Configured and managed Kubernetes resources such as Horizontal Pod Autoscalers (HPA), Load Balancers, and Secrets.
- Set up monitoring and alerting by installing and configuring Prometheus and Grafana, enabling real-time visibility into system health.
- Resolved complex issues including application failures, networking errors, node-level problems, coordinating with L1/L2 support teams for incident resolution.

Project 1: System Engineer | United Parcel Service : May'21- Mar'22

- Experienced and managing cloud services - EC2/VM, S3/SA, ALB/Frontdoor, Route 53/Azure DNS, VPC/VPN, CloudWatch/Azure Monitor, Security Groups (SG), and SNS.
- Configured and deployed applications on AWS EC2/VM instances with automated scaling.
- Monitoring tool like CloudWatch/Azure Monitor and action the alerts accordingly.
- Configured Auto Scaling Groups and Elastic Load Balancers (ELB) to support traffic growth.
- Implement and Deploy the Cloud Infrastructure by using Manifest files.
- Migrated on-premise applications to Azure App Services and Azure SQL.
- Handled Azure Active Directory (AAD) for identity and access management, including RBAC policies.
